

RAM²-Nozomi Integration

RAM², OTORIO's Next Generation Security Orchestration, Automation, and Response (SOAR) platform, integrates with NOZOMI's Guardian™ and correlates asset data and events to generate early detection of security incidents. The OTORIO RAM² platform mitigates threats, enriches the alerts reported to the SOC, and reduces the mean time to resolution.

Use Case:

Segmentation Assessment

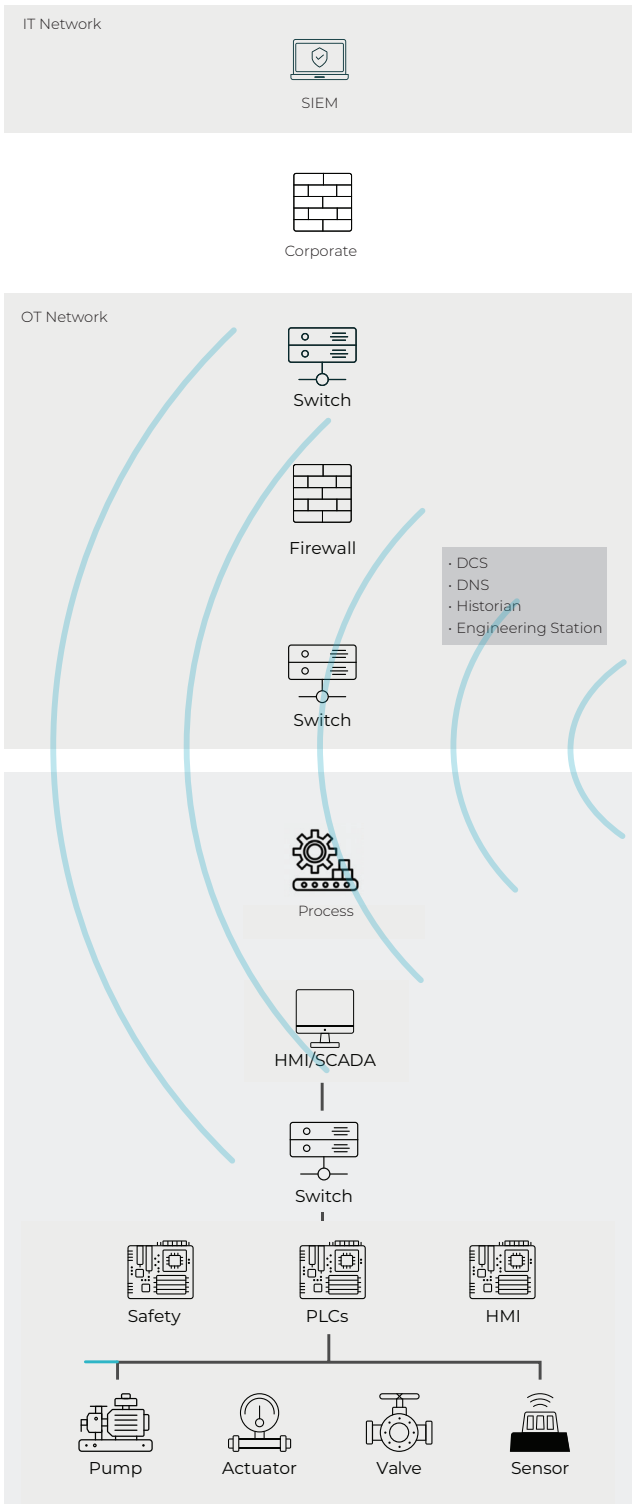

RAM² identifies suspicious patterns by correlating information that indicates the presence of a rogue asset. RAM² identifies deviations from the company policy and the lack of protection by an EDR. It correlates this information with the Guardian report about communication in unauthorized protocols. RAM² generates an insight, groups these events to generate an alert about a rogue device, and suggests a playbook with clear steps for investigation and a quick mitigation of the risk.

OTORIO's RAM² Solution

OTORIO's Risk Assessment, Monitoring & Management platform (RAM²) is a Next Generation Orchestration, Automation and Response (SOAR) and SIEM platform. RAM² was designed to provide cybersecurity and digital risk management capabilities in converged IT/OT/IoT environments comprising hundreds of multi-protocol devices.

Integration Benefits

- Increases visibility in the network by providing asset inventory
- Keeps your network safe by generating early warnings of an attack on the industrial network
- Prevents security vulnerabilities by detecting misconfigurations of OT assets
- Ensures operational continuity with ongoing OT risk assessment and risk reduction

About OTORIO

OTORIO combines the professional experience of top nation-state cyber-security experts with cutting edge digital risk management technologies to provide the highest level of protection for the manufacturing industry. OTORIO's automated Digital Risk Based Maintenance solution aggregates threat data analysis to provide deep insights into industrial control systems, identifying risks and mitigating them before they can cause damage. OTORIO empowers industrial companies to implement, automate, and operate secure production, making way for a safer, more reliable, and productive industry.
